

# ABSTRACT

A cordless digital audio headphone is disclosed. The  
headphone includes a pair of earphones connected to a  
headband. The earphones provide audible signals. The  
5 headphone also includes a memory slot positioned on the  
headband for receiving a memory card containing digitally  
stored audio information. A processor is disposed on the  
headband, and is coupled to the memory slot for retrieving the  
digitally stored audio information from the memory card. An  
10 analog to digital converter receives the digitally stored  
audio information, and provides the audible signal to the  
earphones.
